

Great lfe Freshman Companion (GUIDE17)

Movement for Today: Architectural Baseline & Quality Fortification

DATE & TIMESTAMP

2026-09-28 // Session 025

AUTHORED BY

Project Lead & Antigravity

TARGET VIEWPORT

Mobile-First (360px – 420px)

OPERATING RULE

Strict Anti-Slop & Ground Truth

CORE OPERATING PHILOSOPHY

"We're building the skeleton and the muscles holding the skeleton together first. Advanced additions roll out progressively as we grow."

📌 Strategic Alignment on Team Feedback (NUSMods & TUM)

The team member's voice notes brought high-value analysis modeled after **NUSMods** (open-source timetable & map routing) and **TUM Munich** (all-in-one student portal). While we embrace this long-term trajectory, attempting full campus-wide timetabling and live GPS tracking immediately creates massive data maintenance drag. **Our agreement is clear: anchor the basics today, then scale features progressively.**

⚡ Our 3-Step Movement for Today

MOVEMENT 1

Architecture & Build

Build Layer A (Public Info Portal) & Layer B (OAUMods Companion)

Construct the foundational two-layer structure that forms the core backbone of the project:

- Layer A (Public Orientation & Info Portal):** High-impact hero introducing Great lfe culture, freshman halls (Angola for males, Mozambique for females, plus Fajuyi & Awolowo), landmark directory (Oduduwa Hall, SUB, Motion Ground, Pit Theatre), and campus lingo.
- Layer B (OAUMods Companion App):** Seamlessly accessible freshman utility suite featuring the Freshman Clearance Checklist (persisted via `localStorage`), 100-Level Course Helper, and Venue Directory (BOO, 1k LT, AUD).

MOVEMENT 2

Multi-Device QA

Rigorous Interaction, Viewport & Offline Testing

Stress-test the unified skeleton across real-world campus constraints before external integrations:

- Viewport Integrity:** Strict validation across 360px, 390px, and 414px viewports to eliminate horizontal scrolling leaks and ensure minimum 48px touch targets.
- Offline-First Resilience:** Verify that the app and its stored checklist/course data load and run smoothly without active internet connectivity.
- State Retention:** Guarantee that freshman clearance checklist marks and custom courses survive page refreshes and browser restarts.

MOVEMENT 3

Visual & UX Polish

Extreme UI/UX Elevation (No Vibe Code / No Agent Slop)

Elevate the product aesthetic beyond a "plain school website" to a world-class consumer-grade app:

- Curated OAU Palette:** Deep OAU Navy (`#0A192F`), Rich Ochre Gold (`#D97706`), and Forest Emerald (`#059669`).
- Modern Design Standards:** Refined frosted glassmorphism, responsive micro-animations (<150ms transitions), and crystal-clear typographic hierarchy.
- Mobile Dock Navigation:** Smooth, thumb-friendly bottom app dock designed for seamless navigation while walking between lecture halls.

🔧 WHAT COMES NEXT (PROGRESSIVE PHASE 2 & BEYOND)

Once today's skeleton and muscles are rock-solid and verified, we will progressively introduce: **(1) Leaflet.js + OpenStreetMap integration** with walking time prompts from Angola/Moz, **(2) Supabase user accounts & notes**, and **(3) Faculty-wide timetable builder with manual slot adjustments**.
